Brute Force Attacks
Objective
In this lab, you will first perform a targeted brute force attack against a single high-value user account to witness how easily a weak password can be compromised. Then, as the administrator, you will neutralize this entire class of attack by implementing a multi-factor authentication (MFA) policy.
Scenario
(The Year: 2015)
Execute Payload
This action requires no configuration. Click Execute to run it.
Close
Execute
been contained, but the "what if" is chilling. What if the attacker had been more stealthy? They could have stolen our entire intellectual property.
A frantic investigation reveals a disturbing and sophisticated pattern in
